

Whitepaper

9th December 2021

By Jib Sil and Dr. J

Introduction

We, the developers at Synex Coin, are huge fans of Minecraft. To show our appreciation for the game, we have developed the Synex token to serve as a fun and quirky salute to the world's most popular game. We are also using our token as a tool to bring Minecraft and its players into the crypto currency era. We are developing a plugin for the game that will use the Solana network to allow servers to grow blockchain based economies. This project is about building a community that will further support the game that we all know and love. Please come and join us on our journey.

Roadmap

November 2021

- Website and community communications (Twitter and Telegram) established
- Synex token is minted
- Airdrop (1 million Minecraft tokens)

December 2021

- Trading commences on Raydium, Step Finance, Dexlab and Serum
- Yield farm opened on Step Finance
- Tracking begins on Coinmarketcap, CoinGecko and Coinbase
- Team hires community manager
- Plugin prototype developed, linking Synex token to Minecraft

Q1 2022

- Airdrop events (1 to 3 million Minecraft coins)
- Plug-in prototype enters alpha stage
- Plug-in is launched on test server
- Establish partnerships with Minecraft servers
- Grow and develop the community on social media channels

Q2 2022

- Plug-in enters beta stage
- Plug-in is launched a community of servers (five or more)

Q3 2022

- Plugin enters stable release
- Product is adopted by 20 servers or more
- Synex tokens are purchased by participating servers

Q4 2022 and Beyond

- Add more servers to the Synex network
- List Synex Coin on centralized exchanges
- Distribute remaining Synex tokens from the network pool

Tokenomics

Where can I buy it?

We're glad you asked! We have many exchanges that we are listed on. Currently, they are all decentralized exchanges.

- Raydium
- Step Finance
- Dexlab
- Serum
